

TCS NQT Java Coding Questions - Interview Style

This PDF contains Java coding questions written in proper interview style using separate methods/functions.

1. Check Even or Odd

```
import java.util.*;

public class Main {

    static boolean isEven(int n){
        return n % 2 == 0;
    }

    public static void main(String[] args){

        Scanner sc = new Scanner(System.in);
        int n = sc.nextInt();

        if(isEven(n))
            System.out.println("Even");
        else
            System.out.println("Odd");
    }
}
```

2. Check Prime Number

```
import java.util.*;

public class Main {

    static boolean isPrime(int n){

        if(n <= 1)
            return false;

        for(int i = 2; i <= Math.sqrt(n); i++){

            if(n % i == 0)
                return false;
        }

        return true;
    }

    public static void main(String[] args){

        Scanner sc = new Scanner(System.in);
        int n = sc.nextInt();

        if(isPrime(n))
            System.out.println("Prime");
        else
            System.out.println("Not Prime");
    }
}
```

3. Factorial of Number

```
import java.util.*;

public class Main {

    static long factorial(int n){

        long fact = 1;
```

```

        for(int i = 1; i <= n; i++){
            fact *= i;
        }
        return fact;
    }

    public static void main(String[] args){
        Scanner sc = new Scanner(System.in);
        int n = sc.nextInt();

        System.out.println(factorial(n));
    }
}

```

4. Reverse String

```

import java.util.*;

public class Main {
    static String reverse(String str){
        String rev = "";
        for(int i = str.length()-1; i >= 0; i--){
            rev += str.charAt(i);
        }
        return rev;
    }

    public static void main(String[] args){
        Scanner sc = new Scanner(System.in);
        String str = sc.nextLine();

        System.out.println(reverse(str));
    }
}

```

5. Bubble Sort

```

import java.util.*;

public class Main {
    static void bubbleSort(int[] arr){
        int n = arr.length;
        for(int i = 0; i < n-1; i++){
            for(int j = 0; j < n-i-1; j++){
                if(arr[j] > arr[j+1]){
                    int temp = arr[j];
                    arr[j] = arr[j+1];
                    arr[j+1] = temp;
                }
            }
        }
    }

    public static void main(String[] args){
        Scanner sc = new Scanner(System.in);

        int n = sc.nextInt();
        int[] arr = new int[n];

        for(int i = 0; i < n; i++){
            arr[i] = sc.nextInt();
        }

        bubbleSort(arr);
    }
}

```

```

        for(int num : arr)
            System.out.print(num + " ");
    }
}

```

Remaining Important Questions to Practice

Question
Fibonacci Series
Reverse Number
Palindrome Number
Armstrong Number
Sum of Digits
Largest of Three Numbers
GCD
LCM
Leap Year
Count Vowels and Consonants
Anagram
Remove Duplicates from String
Second Largest in Array
Linear Search
Binary Search
Selection Sort
Insertion Sort
Matrix Addition
Transpose Matrix
Frequency in Array
Check Sorted Array
Merge Arrays
Missing Number
Count Words
Remove Spaces
Duplicate Elements
Move Zeroes
Rotate Array
Palindrome String
Count Digits
Sum of Array
Minimum Element
Pattern Printing
Power of Number

Decimal to Binary
Binary to Decimal
Perfect Number
Strong Number
Even Odd Count in Array
Intersection Arrays
Check Substring
Remove Specific Character
Sum of Prime Numbers
Reverse Words
Two Sum Problem
